

SAFETY, HEALTH AND ENVIRONMENTAL AWARENESS (SHEA) TRAINING

Our SHEA courses cover the essentials of **safety, health** and **environmental awareness**; designed for those working across the **energy and utilities sector**.

Who the courses are for

The one day courses are designed for all individuals requiring access to operational sites, including supervisors and managers.

Benefits to your business

- ▶ Contextualised content makes it 100% relevant
- ▶ Interactive courses that cater for different learning styles
- ▶ Accessible and comprehensive approach to assessment
- ▶ Delivered by trainers with experience in the relevant industry
- ▶ All SHEA courses are CSCS affiliated

Key Features

1. SHEA courses are available across a wide range of industries:
 - Water
 - Power
 - Gas
 - Networks and Telecommunications
 - Waste and Resource Management
 - Cross-Country Pipeline
2. Each course consists of contextualised core learning plus industry specific content
3. Multiple choice assessment for each module

Energy & Utility Skills Register (EUSR) Registration

Successful completion of a course results in EUSR registration for SHEA (in the relevant industry), valid for three years (except for SHEA Gas which is five years).

Access to CSCS controlled sites

EUSR registration allows access to CSCS controlled sites for utilities work.

How SHEA Works

All courses have been developed by relevant health and safety professionals in collaboration with a range of industry stakeholders including asset owners/large employers, contractor employers, training providers and independent trainers.

Contextualised to your industry

Each course consists of contextualised core learning plus industry specific content:

SHEA (Water)

Water industry course including additional units on highway working and excavations, sewerage network and process operations.

SHEA (Gas)

Developed for the gas industry with specialist units on highway working and excavations, safety in premises and pressure regulating installations.

SHEA (Power)

Power industry course including additional units on power industry hazards and power generation and distribution.

SHEA (Cross-country pipeline (CCPSHE))

Cross-country pipeline course covers our core units as well as specialist units on traffic management, welding and non-destructive testing and the environment.

SHEA (Telecommunications)

Developed for the telecommunications industry with an additional unit on highway working and excavations.

SHEA (Waste and Resource Management)

Developed for the waste management industry, the course covers our core units, contextualised to the industry. There is also an additional unit on waste collection.

SHEA (Core)

The SHEA Core course consists of six units that are common to all health and safety contexts. The SHEA Core can be taken as a course in its own right and consists of:

Unit 1: Understanding our workplace responsibilities

Unit 2: Understanding the effects of our work on the working environment

Unit 3: Identifying and controlling risks

Unit 4: Common hazards in the workplace

Unit 5: Occupational health hazards

Unit 6: Responding to emergencies
